

Sirs;

I would like you to urge you to reject the NAB's petition 04-160 demanding that satellite radio cease broadcasting local traffic and weather. Living in Richmond, VA, but often commuting to Washington, DC, I use XM's weather and traffic information on a constant basis to help plan my commute. XM provides a valuable service for people like myself who often have to drive considerable distances, even from one metro area to another, during their commute. In todays highly mobile age, I urge you not to take away XM's ability to offer a valuable service to their subscribers. Thank you very much.

Brian Sullivan
